EDUCATION

B.E – Computer Science and Engineering - Third Year
CGPA: 8.33/ 10

KIT-KALAIKARNANINIDHI INSTITUTE OF TECHNOLOGY
2024-2028

EXPERIENCE

DECODE LABS, Remote Workshop

([Link](#))

- Applied Python, Pandas, NumPy, Scikit-learn, and Machine Learning concepts to design and develop AI-based solutions, including rule-based chatbots, recommendation systems, and data classification models, while following structured development practices.
- Strengthened practical expertise in data preprocessing, feature engineering, model development, algorithm implementation, Git/GitHub version control, and debugging, contributing to the successful completion of multiple AI/ML projects in a collaborative learning environment.

PROJECTS

AI Phishing Detector (Python, Flask, Scikit-learn, HTML, CSS, JavaScript, Machine Learning, MongoDB)

([Repo](#))

- Developed an AI-powered phishing website detection system that analyzes URLs using machine learning to identify malicious websites in real time.
- Engineered a feature extraction pipeline and trained a Scikit-learn classification model, integrating it into a Flask application for accurate phishing prediction.
- Built a responsive web interface using HTML, CSS, and JavaScript and integrated MongoDB to securely store user queries, prediction history, and application data.

AI-Powered Food Waste Tracker (Python, Flask, Machine Learning, Pandas, HTML, CSS, React.js, Node.js)

([Repo](#))

- Developed an AI-powered food waste management platform to monitor inventory, predict spoilage risk, and promote sustainable food consumption.
- Applied Pandas and machine learning techniques for data preprocessing and predictive analysis, enabling intelligent food waste estimation and recommendations.
- Built a responsive full-stack application using React.js, Node.js, and Flask, delivering an interactive dashboard for inventory tracking, expiry monitoring, and waste analytics.

Interactive Web-Based System for Managing Events and Clubs (React.js, Node.js, HTML, CSS, MongoDB)

([Repo](#))

- Developed a full-stack web application for managing student clubs, event creation, registrations, and member activities through a centralized platform.
- Implemented secure role-based authentication and authorization using Node.js, enabling efficient administration for students, coordinators, and administrators.
- Designed and integrated a MongoDB database to manage user profiles, club information, event registrations, and activity records with efficient data handling.

TECHNICAL SKILLS AND CERTIFICATIONS

TECHNICAL SKILLS

Programming Languages: C++,Python,C,SQL

Web Development & Frameworks: Flask, ReactJS, NodeJS, HTML, CSS

AI/ML, Data Analytics: NumPy, Pandas, Scikit-Learn,Machine Learning

Databases, Tools & Core Concepts: MySQL, MongoDB, Git, GitHub, Data Structures & Algorithms (DSA), DBMS, Object-Oriented Programming (OOP)

CERTIFICATIONS

• Principle of Generative AI Certification

([View](#))

• Python Foundation Certification

([View](#))

• Artificial Intelligence Fundamentals

([View](#))

• Prompt Engineering Basics

([View](#))

COMPETITIVE PROGRAMMING

LeetCode: Current Rating: 1759 | Solved Problems: 815+ | Top 9.53% Globally | Highest Rating 1874 |

Codeforces: Current Rating: 805 | Solved Problems: 290+ | Highest Rating : 1058 | Position : Newbie |

CodeChef: Current Rating: 1590 | Position: 2 Star | Solved Problems: 900+ | Highest Rating: 1608 | Global Ranking: 15676 |

ACHIEVEMENTS

- 36-Hour Hackathon Finalist: Qualified as a finalist in a 36-hour innovation and software development challenge.
- Solved 2600+ algorithmic and data structure problems across competitive programming platforms, participated in 260+ coding contests, and maintained a 535-day problem-solving days.
- Achieved a 5-star rating on HackerRank, reflecting proficiency in problem-solving and core programming concepts.

DECLARATION

I solemnly declare that the statements made in this resume, including my academic credentials, technical projects, and skills, are authentic and accurate to the best of my knowledge.
